                                                                                                                                                                                                                                                                                                                                                                                                                                                                       -I- TISSUE SPECIFICITY: Widely expressed in brain, testis, lung, spleen and kidney. Weakly expressed in liver.
-I- DEVELOPMENTAL STAGE: Expressed in the unfertilized egg, in the blastocyst, as well as in the developing embryo and fetus.
-Expressed in developing skin.
-I- DISEASE: Defects in RALY are the cause of lethal yellow mutation (A(y)), a dominant allele that cause embryonic lethality when homozygous, and pleiotropic effects when heterozygous, including yellow pelage, obesity, non-insulin dependent diabetes and increased tumor susceptibility. A(y) is due to a 170 kb deletion that removes all but the promoter and non-coding first exon of RALY and links them to the ASIP/Agoutl gene.
-I- SIMILARITY: Contains 1 RNA recognition motif (RRM) domain.

Pathol. 154:29-35(1999).

FUNCTION: Participates in the Wnt signaling pathway. Binds to Dr. PUNCTION: Participates in the absence of CTNNB1, and as activated and acts as repressor in the absence of CTNNB1, and as activated in its presence. Necessary for the terminal differentiation of ints presence. Necessary for the terminal differentiation of the participation of the participation.

-I- FUNCTION: INVOLVED IN THE DEVELOPMENT OF THE DROSOPHILA SYSTEM AND OCELLAR VISUAL STRUCTURES.

-I- SUBCELLULAR LOCATION: Nuclear (Probable).

-I- DEVELOPMENTAL STAGE: EXPRESSED IN THE ANTERIOR REGION OF EMBRYO BEFORE CELLULARIZATION AND BECOMES LOCALIZED TO TEMBRYO BEFORE CELLULARIZATION AND BECOMES LOCALIZED TO TEMBRYO BEFORE CELLULARIZATION GASTRULATION.

-I- DOMAIN: CONTAINS MULTIPLE REPEATS CONSISTING OF SINGLE ACTIVALULARIZATION.

-I- DOMAIN: CONTAINS MULTIPLE REPEATS CONSISTING OF AMINO ACIDS OF TAXABLE AND ASIN AND PAIRS OF AMINO ACIDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Homeotic |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Andrew D., Nathans J., Nusse R.;
"A new member of the frizzled family from Drosophila functions as
                                              FUNCTION: Receptor for Wnt proteins. Most of frizzled receptors are coupled to the beta-catenin canonical signaling pathway, which leads to the activation of dishevelled proteins, inhibition of GSK-3 kinase, nuclear accumulation of beta-catenin and activation of wnt target genes. A second signaling pathway involving PKC and calcium fluxes has been seen for some family members, but it is not yet clear if it represents a distinct pathway or if it can be integrated in the canonical pathway, as PKC seems to be required for Wnt-mediated inactivation of GSK-3 kinase. Both pathways seem to involve interactions with 6-proteins. Required to coordinate the cytoskeletons of epidermal cells to produce a parallel array of cuticular hairs and bristles.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          OR.

Stripe pattern is emerging by early stage 8. From stage 9 and continuing throughout embryogenesis, expression is seen in the developing CNS. At stage 10, expressed in 15 stripes in the presumptive head and trunk regions, in the posterior midgut primordium, in a subset of cells of anterior midgut invagination and in the procephalic lobe. At stage 12, expression declines in epidermis and increases in the midgut and visceral mesoderm. At stage 17, only expressed in the CNS, hindgut and dorsal vessel.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       the Wnt/beta-catenin signaling pathway (By similarity). DOMAIN: The fz domain is involved in binding with Wnt ligands.
